We'd be happy to tell you everything there is to know about the Airtube. Curious to know what the Airtube could do for your company? Or would you like a no-obligation demonstration? Just give us a call or send us an email.

**AIRTUBE**<sup>®</sup>

No water

No ice

No Trouble

**Water can accumulate on the roof of your truck and if it freezes, you have a slab of ice. Extremely dangerous when you're out on the road. But, time is money and drivers often fail to ensure that the roofs of their truck are clear of ice and water. And that's a risk. Ice flying from trucks is a frequent cause of accidents. Often, the outcome isn't serious, but sometimes there is serious damage and sadly, personal injury.**

**The solution**

The Airtube is the perfect solution. It is guaranteed to be effective. Take your responsibility seriously and avoid accidents and damage.

- Avoid accidents and damage
- Save time and costs
- Reinforce your reputation
- All sizes and easy to install
- No need to walk over the load

**A proven solution**

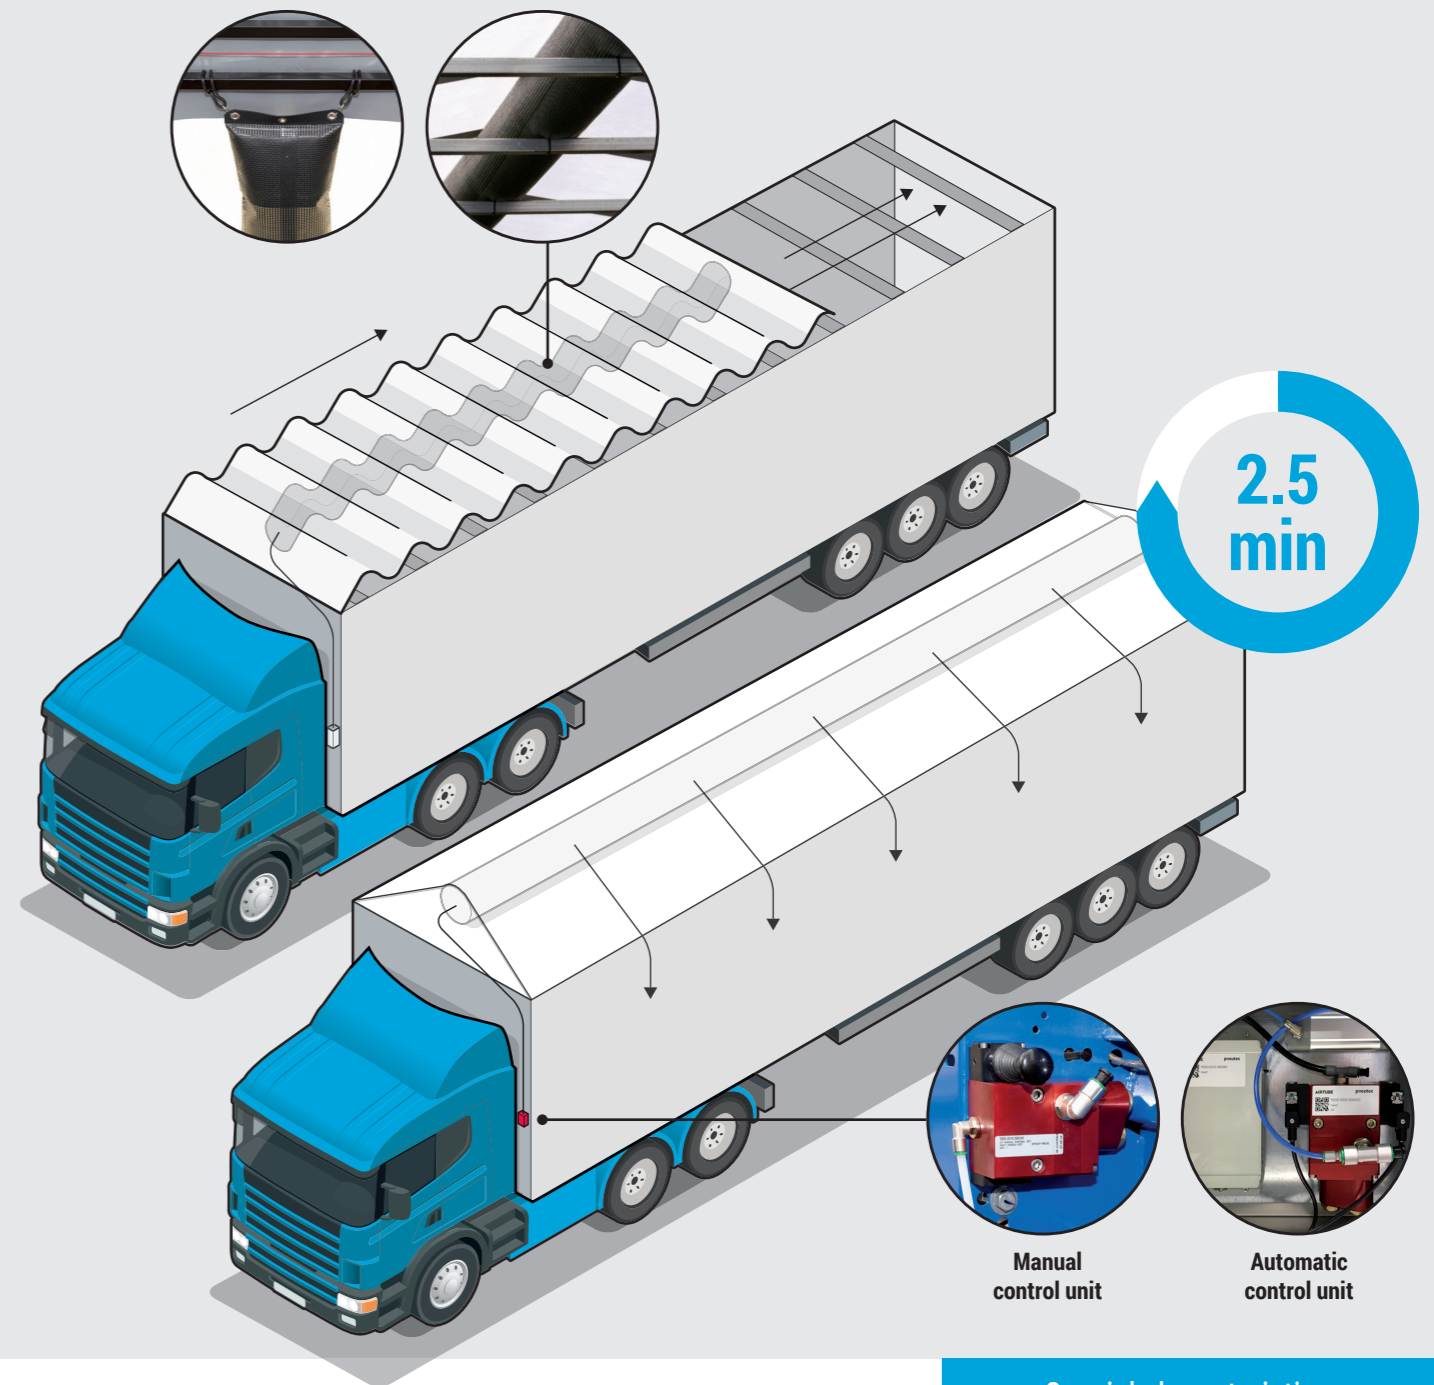

The Airtube is a simple, proven solution that has been perfected down to the very last detail.

The Airtube's wide, flexible hose rests on the roof beams and is secured to the tarpaulin. When the driver switches the ignition off, the Airtube is filled with compressed air within just 2.5 minutes. The Airtube expands and presses the centre of the roof cover upwards over its entire length, preventing water from remaining on the roof.

Heading back out onto the road? Either with a quick touch of the handle or fully automatically the Airtube will deflate in 2.5 minutes. Safe travels!

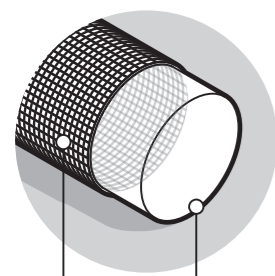

**Clear legislation**

Causing an obstruction to traffic is prohibited in virtually every country. And driving with ice on the roof? Since it could cause an obstruction, that's prohibited too. The driver is responsible and could receive a hefty fine. In the event of an accident, it could well be considered a punishable offence. The haulier and shipper may be held jointly liable. All risks that can be avoided. The Airtube helps to avoid fines and accidents caused by ice on the roof.

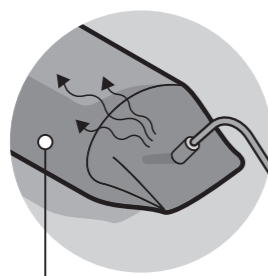

**Special functions**

Durable, flexible, double layer air tube

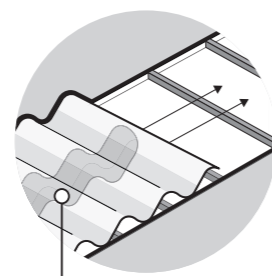

**Cloth** Robust  
**Inner tube** 100% airtight

Fills up while parking. Empties on departure

**Fast Performance** <2.5 Minutes

The convertible top closes within 2.5 minutes

**Airtube** Increases due to the tarpaulin

**Special characteristics**

**Benefits**

- No more ice or water on the roof
- Socially responsible
- Sustainable solution
- Reinforces reputation
- Prompt delivery of freight
- Cost-effective investment
- Safer for all road users
- No water damage to the load
- Easier closing of sliding roofs
- Drivers no longer need to access the load floor

Ready to use within 2.5 minutes

50% faster operational

50% lighter

Condensation water tight

100% airtight, no refilling

Carefree solution
